Hey there! Thought this might be of interest. Please feel free to use/forward at will.

### **Former UN Ambassador John Bolton Doesn't Believe UN Officials Were Told to Spy**

This morning on the nationally syndicated radio show, "America's Morning News," former U.S. Ambassador to the United Nations, John Bolton, was adamant that he does not believe American officials were directed to spy at the United Nations. Bolton told co-hosts John McCaslin and Amy Holmes that "I don't believe that cable.... I think it probably came from somewhere in the intelligence community. I wish we could find that out because it's obviously very damaging."

See transcript below and audio clip attached.

America's Morning News  
Tuesday, November 30, 2010

Ambassador Bolton: "I don't believe that cable. I've read in my career, I've probably read a million cables. Maybe not a million, but close to it. I have never seen a cable like that. I do not think that is a State Department cable. I think it probably came from somewhere in the intelligence community. Why it got into the State Department system, I can't say. Honestly, I don't know the answer to that. But I do not think that state department personnel were being asked to engage in espionage. I just don't see it. I think that cable got mixed up somehow. I wish we could find that out because it's obviously very damaging to State Department personnel all over the world if people are worried they are going to be filching documents out of their copy machines. But I honestly think that document is not an accurate. There's something wrong there."
